PROFILE SUMMARY

Full-Stack MERN Developer with 3.6 years of experience building scalable web applications using React.js, Node.js, Express.js, and MongoDB, with real-time systems, REST APIs, and performance-optimized architectures. Knowledgeable in AI/LLM technologies (OpenAI, LangChain, RAG) through independent projects.

TECHNICAL SKILLS

Programming Languages: Javascript, Typescript

Frontend: Reactjs, Nextjs, Redux/RTK, Material UI, TailwindCSS

Backend: Node.js, Express.js, REST APIs, Authentication, MongoDB, JWT

AI and LLM Technologies: OpenAI API, LangChain, RAG Applications, Prompt Engineering, Vector Databases

Tools: Git, GitHub, CI/CD, Postman, Swagger

WORK EXPERIENCE

Software Engineer (MERN Full Stack Developer)

CoffeeWeb Technology Pvt Ltd, Bangalore, India

July 2023 - June 2026

- Developed an end-to-end GenAI feature using the MERN stack and OpenAI API, creating backend REST endpoints to serve automated answers for both preset quick-questions and free-form user inputs.
- Owned the backend architecture for the Menu, Coffee Reports, and News Feed admin dashboard modules, building scalable REST APIs using Node.js, Express, and MongoDB.
- Optimized infrastructure costs by ~22% by limiting WebSocket connections to actual market open/close hours (UTC-based, for global users) instead of running continuously, for a live coffee futures market data screen.
- Implemented dynamic meta tags, descriptions, and Open Graph data via React Helmet, increasing organic search traffic by ~15%.
- Maintained and refactored existing React.js modules by improving code structure, removing duplicate logic, and creating reusable components, improving code maintainability and reducing future development effort.
- Implemented lazy loading, infinite scrolling, and responsive design improvements, alongside Firebase push notifications and WebSocket-driven real-time updates, to boost performance and user engagement.

Software Engineer (React.js Developer)

Canopi India Pvt Ltd, Bangalore, India

May 2022 - Nov 2022

- Developed admin dashboards for user management, role-based access control, and content workflow operations.
- Built a reusable UI component, reducing duplicate development efforts and improving frontend consistency across product modules.
- Designed a global API error handling system, improving debugging efficiency and built scalable, reusable UI components using React.js and Material UI.

PROJECTS

- **Prism:** Developed an AI Gateway using Node.js, Express.js, MongoDB, and OpenRouter API with multi-provider LLM routing, semantic caching, retry failover, usage metering, and an operations dashboard for monitoring AI traffic, costs, latency, and cache performance.
- **RAG-Based-Profile-Matching:** A Retrieval-Augmented Generation (RAG) system that automatically matches and ranks candidate resumes against job descriptions using semantic search and hybrid scoring — built entirely in Node.js with no external API keys required. Using Node.js, vectorDB.json, chart.js + canvas, pdfjs-dist, and @xenova/transformers.

CERTIFICATIONS

Airtribe

AI-First Backend Engineer

Bangalore, India

Oct 2025 - July 2026

Masai School

MERN Full Stack Developer

Bangalore, India

June 2021 - Feb 2022

EDUCATION

B.R Mirdha College

MA (Political Science)

Nagaur, Rajasthan

June 2017 - July 2019
